

Laser-Fast Processing and Accurate Inventory

Parts Barcoding

Ask Yourself...

- ? Is a manual receipting process wearing you out?
.....
- ? Are you constantly finding errors in your parts inventory?
.....
- ? Do you dread the day physical inventory comes around?
.....
- ? How much is it costing you to have an inaccurate and out-of-date parts inventory?

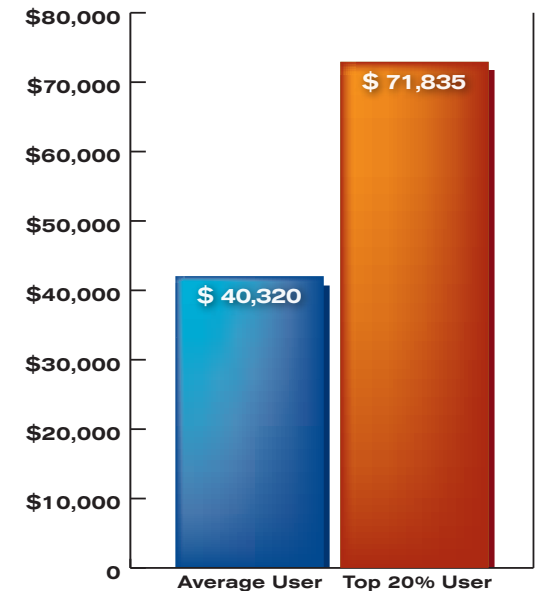

Industry benchmarks suggest your obsolescence should be less than 10%.¹

Expect Results

- Reduce order receipting time by over 62%.
- Reduce data entry time by up to 85%.
- Save up to 1.8 minutes per part line received.
- Cut counting parts time by over 50%.
- Improve inventory accuracy.

Annual Savings with Parts Barcoding

In a Reynolds Performance Study, Parts Barcoding users have seen an 18% improvement in their true turn rate over non-users, which has led to an average annual savings of \$40,320.²

About Parts Barcoding

With this simple-to-use parts scanning tool, you can accurately record counts for perpetual and physical inventory audits and significantly decrease the time it takes to receipt parts and process special orders.

The image displays three overlapping screenshots of the Parts Barcoding software interface. The top-left screenshot shows a 'Bar Code' menu with various options like 'Scan Stock', 'Bin Change', and 'Physical Inventory'. A green callout bubble points to this menu with the text 'All related options available in one place.' The top-right screenshot shows a 'Search' window with search criteria and a table of 'Results Found - 35'. A green callout bubble points to the search criteria with the text 'Precise tracking of every part scanned for accurate inventory.' The bottom screenshot shows a 'Physical Inventory User Summary' report with detailed statistics for two users. A green callout bubble points to the report with the text 'Detailed reports to help measure solution performance.'

“If we were to stop using Parts Barcoding, we would have to hire one or two more people and manually enter every part.”
