

Announcing New ERA[®] Software Manager! ***No-cost Update Required for ERA v.9.5 Enhancements***

ERA Software Manager is a new tool to drive efficiencies in your dealership operations, and is available now at **no extra cost**, as part of your regular ERA system enhancements. ERA Software Manager is used to automatically distribute software enhancements to PCs running Reynolds applications, and will reduce the need to load Reynolds' CDs workstation-by-workstation. This can save you significant time and will ensure that you're always on the current ERA software release.

With the upcoming ERA release v.9.5, we are updating Sales and F&I applications so that future enhancements can be automatically distributed through ERA Software Manager. These include ERA *Desking*, *F&I Menus*, *Vehicle BookOut*, and *Credit Application*. If you subscribe to any of these applications, you **are required** to install ERA Software Manager **prior** to loading ERA v.9.5, to continue using them.

A member of the Reynolds' ERA support team will contact your System Administrator to assist with the installation of ERA Software Manager. Or, you can call the Technical Assistance Center at 800.767.0080, or access <https://my.reyrey.com> for detailed instructions, to get started right away. Loading ERA Software Manager should take only a few minutes per workstation.

This enhancement is included as part of your monthly support fees. We also have many new solutions for you to consider, designed to make your business better. As always, we invite you to visit www.reyrey.com to learn about our new solutions and services.
